COURSE PROJECT

AI-ASSISTED PYTHON FOR BUSINESS PROBLEM SOLVING

Prof. Evandro Zatti

HANDS-ON

- Now apply the same reasoning to the business context selected by your team.
- Identify a simple calculation or information-processing task that exists in your chosen context.
 - ✓ Examples may involve: prices; quantities; costs; durations; rates; percentages; scores; targets; indicators.
- The task must produce a meaningful business result.

STEP 1: DESCRIBE THE BUSINESS PROBLEM

- Write a short description containing:
 - ✓ Business Context: What type of organization or process are you working with?
 - ✓ Problem: What needs to be calculated or processed?
 - ✓ Purpose: Why would this result be useful?
- Do not begin by describing Python code. Begin by describing the organizational need.

STEP 2: DEFINE THE IPO MODEL

- **INPUT:** What information does the solution need?
- **PROCESSING:** What calculations or transformations must occur?
- **OUTPUT:** What information should the solution produce?
- **Business Rules:** Are there relevant organizational rules or constraints?

STEP 3: CREATE THE FIRST PYTHON SCRIPT

- Create a Python .py file that:
 - ✓ represents relevant business information using variables;
 - ✓ uses appropriate data types;
 - ✓ receives at least some information using `input()`;
 - ✓ performs at least one meaningful calculation;
 - ✓ stores calculated results in variables;
 - ✓ displays a clear formatted result using `print()` or f-strings.

DOCUMENT YOUR AI INTERACTION

- Record at least:
 - ✓ the prompt you used;
 - ✓ the relevant AI response;
 - ✓ which suggestions you accepted;
 - ✓ which suggestions you rejected;
 - ✓ why you made those decisions.
- This documentation demonstrates that AI was used as a supporting tool rather than as a substitute for your own reasoning.

GENERIC EXAMPLES ACROSS BUSINESS CONTEXTS

Context	Possible First Calculation
Pizzeria	Order subtotal
Clinic	Consultation cost
Academic Management	Student average
Retail	Purchase total
Hotel	Stay cost
Logistics	Delivery cost
Gym	Membership cost
Event Management	Registration revenue
